

High-level Implementation Graph for `experiments_related`

Generated from the implementation-only export

July 7, 2026

Scope. This graph is reconstructed from the uploaded implementation-only archive rooted at `experiments_related`. It maps implementation families and staged artifacts only; it does not claim that any training run completed or that any reported numerical metric was achieved.

Edge semantics. Solid edges denote direct script/module wiring, explicit imports, launch calls, or direct data loading conventions visible in code. Dashed edges denote staged filesystem dependencies inferred from output/checkpoint paths, CLI arguments, or wrapper scripts; the archive does not include the produced artifacts.

Figure 1: Reconstructed high-level implementation graph. Node labels include the primary source paths used as evidence.
